Operating Instructions
1. Locate both power switches on left side of control unit.
2. Turn both switches to ON position.

Mattress Inflation/Autofirm
Press AUTOFIRM button to fully inflate surface. Transfer patient to surface. AUTOFIRM times out after 10 minutes and resets to previous setting. To manually exit, press AUTOFIRM a second time.

Pulsation Therapy
1. Set firmness using FIRM/SOFT buttons based on patient comfort and clinical discretion.
2. Press PULSATE button.
3. Press PULSATE button until desired time is reached (3, 5, or 10 min).

Static Therapy
1. Press STATIC button.
2. Set firmness using FIRM/SOFT buttons based on patient comfort and clinical discretion.

See reverse side for additional instructions
Other Features

**Fowler:** Increases airflow when head section of bed is elevated. Newer models include an Auto Fowler feature.

**Firm/Soft:** Increases (FIRM) or decreases airflow (SOFT) creating a firmer or softer surface.

**Lockout:** Locks control panel (auto after 3 min). To unlock, press and hold for 3 sec.

**Alarm Reset:** Light remains illuminated until problem is corrected.

CPR/Quick Deflation

1. **CPR control is on front of control unit.** Depending on model, push red button or turn dial clockwise to activate CPR. Alarm will sound.

2. Locate red CPR valve at head of mattress. Turn valve for quick air release. *-OR-* Locate hose connection to control unit (all models). Disconnect for quick air release.

Patient Transport

1. Activate Autofirm mode for 3-5 minutes to ensure mattress is completely inflated.
2. Turn both power switches off (left side of control unit). Unplug from wall.
3. Mattress will slowly deflate. As patient sinks into mattress, patient will rest on foam transport pad.
